## Venus Temp 2

Transforming temporary into extraordinary.

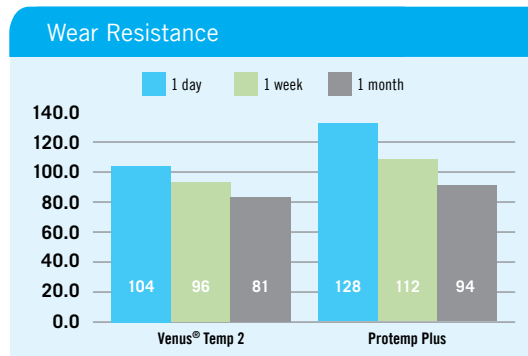

A perfect combination of barcol hardness, low flexural modulus and high flexural strength provide the flexibility and strength that is ideal for long-span bridges.

- Nano-particle formula for a brilliant, esthetic gloss finish
- Exceptional wear resistance and flexural strength
- Optimal flowability for easy handling and application
- Fluoride-releasing
- Available in 5 Vita® shades, perfectly matched to Venus Diamond® Flow flowable composite
- Available in the ideal 10:1 ratio of auto-mixed material
- Very low oxygen inhibition layer that allows for easier handling and polishing

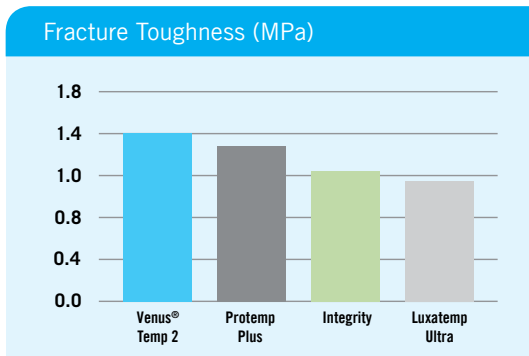

The barcol hardness of Venus Temp 2 is considerably higher than Prottemp Plus, indicating a stronger restoration.

This graph shows that the wear on Venus Temp 2 compared to the competition is lower, providing longer durability over time.

Source: Internal data.

In a study with Tufts University, Venus Temp 2 was proven to excel when compared against the leading competitors in both Fracture Toughness and Flexural Strength.
